

Blood Culture Procedure Packs

Rociale Blood Culture Packs provide qualified healthcare clinicians with everything required to obtain blood samples.

They facilitate the use of correct procedures that reduce the risk of contamination. "Contaminated blood cultures are common, enormously costly and frequently confusing for clinicians"*

Research suggests that by using a blood culture prep kit such as Rociale's, contamination can be significantly reduced.

Peripheral Access and Blood Culture Procedure Packs

Rociale is focused on assisting qualified healthcare professionals to improve efficiency and control infection by following Aseptic Non Touch Technique Guidelines.

Peripheral Cannula Insertion is a vital procedure, providing a direct access point for the administration of fluids/medication and for obtaining bloods for testing and analysis.

Rociale Peripheral Access Packs and Blood Culture Packs present all of the components that are required for a procedure, together in one sterile pack.

Peripheral Access Packs

Rociale's Cannulation packs contain all of the components necessary to carry out the procedure in line with your Trust guidelines.

Having all of the necessary components in one pack ensures that each procedure is carried out correctly, following aseptic guidelines. Rociale's range contains a variety of components available from a number of manufacturers. Using the guide provided, your Trust will be able to choose a pack that offers components already in use by your clinicians and that fit with your existing policies. Each pack will also contain the documents required to record the procedure in the patient's notes.

To ensure correct use, Rociale can assist with training and provide laminated guideline charts for placement within your clinical areas.

Rociale can also produce bespoke packs for where those included in this leaflet do not fit your requirements.
